

 **INCINER8**

i8-10s  
**Multi Purpose  
Incinerator**

**Custom designed to match budget, specification and performance. Features an entry-level secondary chamber for afterburn effect.**

**Industry Leading Insulation Coretex®** insulation is a specially formulated substrate containing various levels of material that ensure almost all of the heat generated within our incinerators stays inside them - increasing performance and efficiency to another level.

**Rigid, Long Lasting Construction** This model is constructed from British made high quality 3mm mild steel plate. They are fully welded for maximum strength by our time-served coded welders. Meaning you get years of trouble-free operation.

### Plug and Play CE-2 Control Panel

Completely re-designed and built in-house since 2017. Our control panels now feature:

- IP65 weatherproof
- User friendly
- Robust Components
- 316 Stainless thermocouples
- Separate primary / secondary control

### Why we use Castable Refractory Linings

- Our latest low cement castable technology has a higher strength and volume stability than the conventional castable.
- It has excellent resistance to thermal cycling
- This castable has fast firing characteristics engineered - so is more robust in the initial firing / commissioning stage and in continued service.

## Key Parts of our Incinerator

### HT Thermocouples

Allows complete control of primary & secondary chamber temperatures via the control panel.

### Low NOx Burners

These are some of the cleanest, most efficient burners available today. These can be supplied as gas or oil fired.

### Primary Chamber

Chamber designed for maximum air flow and circulation which in turn improves efficiency and total burn time.

### Chimney Stack

Stainless steel stack for longevity. Minimum 3m stack height required. Fitted with dispersion cap as standard.

### Secondary Chamber

Creates an 'afterburn' effect using the second burner which helps retain gases for up to 1 second.

### Heavy Duty Lock

Designed by us to ensure tight locking chamber with no air gaps. Easy to open and close.

Incineration is a waste treatment process that involves the combustion of organic substances contained in waste materials. Incineration and other high-temperature waste treatment systems are described as "thermal treatment". Incineration of waste materials converts the waste into ash, flue gas and heat. The ash is mostly formed by the inorganic constituents of the waste and may take the form of solid lumps or powder. In some cases, the heat generated by incineration can be used to generate electric power.

## Applications

Our versatile range of basic incinerators are designed to be multi-purpose. This particular model benefits from a top loading design and very simple operation process. Ideal as a stand-alone machine.

- General waste
- Animal by-products
- Medical waste
- Plastics & packaging
- Camp waste
- Domestic waste
- Bandages and gauzes

This machine can reach in excess of 850°C in the secondary chamber and also retains the gases for up to 1 second.

## Technical Specification

Combustion Chamber Volume (m3)	0.1m3	Average Ash Residue (%)	3%
Metal Thickness	3mm	Thermostatic Device	yes
Burn Rate*	up to 20kg per hour	Shipping Weight (kg)	380kg
Operational Temperature	850°C	Dimensions (l, w, h)	1.2m x 0.5m x 3.2m
Gas Retention	2 seconds	** Dependent on calorific value of waste and local conditions.	

# Site Preparation

## Sheltered

Ideal weather protection for equipment and operator. Our shelters are designed for easy and quick installation on a standard reinforced concrete slab.

Certain regions require some sort of shelter from adverse weather conditions or localised problems. Our products are used in diverse locations from the freezing camps of Antarctica to sweltering temperatures of Sierra Leone.

## Containerised

Containerisation is the most feasible and viable option in contrast to the construction of on-site facilities and housing structures, eliminating the man power and costs involved.

The units arrive complete with electrical power generators and fuel tank with further customization available to suit all needs, regardless of local resources available. The system is available in 10ft, 20ft, and 40ft containers, depending on capacity and optional requirements.

## Trailer-mounted

The trailer is rated to carry up to 2700kg , therefore there is plenty of additional space to carry extra items of equipment including generator sets, fuel and any other equipment. Chassis, framework and panels are galvanized for maximum durability.

These trailers have been built to withstand the rigours of the construction industry. The beam axle system features sealed, specialised wheel bearings and powerful auto-reverse brakes and is unequalled for strength and durability.

All containers supplied are ISO 6346 certified, so they can be used for the shipping and housing of incinerators and any other related equipment.

## CE DECLARATION.

### **MACHINE LISTED BELOW HAS BEEN TESTED BY MANUFACTURER IN FACTORY BEFORE DISPATCH**

PRODUCTION DATE: 2018  
CONFORMS TO ALL SAFETY NORMS WHEN USED ACCORDINGLY  
“CE DECLARATION OF CONFORMITY”  
“CE DECLARATION DE CONFORMITE”  
“CE DECLARACION OF CONFORMIDAD”  
“CE ATTESTATO DI CONFORMITA”  
“EG- KONFORM IT A TSERKLARUNG”

INCINER8 Ltd is one of the largest suppliers of incinerators throughout the world. Manufacturing in a factory in Southport and shipping out products through our dedicated sales team & Global Dealership Network.

An experienced team of researchers, designers and engineers have made INCINER8 an innovator in the waste sector, achieving two Queens Awards and many regional business awards.

Our hand engineered machines can process municipal, medical and animal waste streams, providing the best solutions to waste problems around the world.

Certificate No. 6596

## Speak to the Experts

Our technical sales team are always on hand to answer any questions you may have.
